## EDUCATION

---

### Academlo

Full-stack web developer and computer science

[Certificates](#)

In progress

### Academic Bachelor

Graduated from academic bachelor at the end of 2019

November- 2019

## MAIN PROJECTS

---

### [Ecommerce](#)

October 2022

A web page where the visitor is able to search and purchase technological products

- Handling of asynchronous requests in **React.js** with **Axios**, interacting with the back-end (**CRUD**) for the different functionalities.
- Product, category and search filtering logic from the front-end using **JavaScript**.
- Use of additional libraries to improve the user experience. **React-router-dom**, **Redux**, **Redux-toolkit**, **Redux-thunk**

### [Pokemon](#)

September 2022

Web page that displays cards from the famous anime "Pokemon" and their respective information.

- The operation of the page and user experience are controlled using the advantages of **React.js**, such as dynamic information capture, protected routes with **React-router-dom** and rendering management.
- **CSS** and the **useState** hook is used to control the style of the page in a dynamic and optimized way.

### [Rick and Morty](#)

August 2022

It allows series' fans to explore the multiple dimensions and their multi-dimensional characters.

- Capture information submitted by the visitor and make use of the information for asynchronous requests implementing **Axios**.
- The user experience is improved by adding search facilities by ID or name using **JavaScript** logic and displaying search suggestions

### [Weather](#)

August 2022

A page that shows our visitors' information regarding the climate of their region

- Dynamic geo-location accessing **BOM** and asynchronous request managed with **Axios** and **JavaScript's** logic to display the correct information depending on the visitor's location.

Projects' management was done through **Git** and **GitHub**, repositories of these and more projects can be found on my [GitHub](#)
